DWARF IRIS

Dwarf Iris have an indispensable place in our gardens. Their low height, early bloom, hardiness and modest cultural needs make them favored members of the Iris family in which they fill the gap for plants of dwarf stature.

Dwarf Iris are the earliest Iris of Spring. From March on, depending on the area, they are found in rock gardens, fringing walks, terraces and borders where their cheerful colors contrast and augment those of Daffodils. They are particularly effective grown about a foot from the grass at the front of borders, one variety to a small clump, and about a foot apart. There they furnish a parade of color for the early season and settle down into a nice green edging for the remainder of the year.

- PARADISE PINK (Lapham '50)** .75
A deep pink Iris of great popularity. Rather late, it is deeper in tone than most of the Hall 'Flamingo pinks' and differs from them somewhat in form. It increases exceptionally fast and makes a clump with remarkable color value in the garden. The thick beard is deep red HM '50. AM '52.

DAFFODILS

Every garden should have some Daffodils. They are easy to grow and require almost no care after planting. They will last a lifetime, increasing in number and beauty each year. They may be had in many lovely varied forms, and have few equals as garden flowers. They are desirable for many garden purposes — in masses, in beds or borders, in groups of twelve or more here and there in the hardy border, or in the foreground of shrubbery. For naturalizing in large quantities, no flower is more suitable.

The bright, cheerful flowers are so welcome after winters drabness. Their gay colors are chiefly lemon, yellow and white with some red in their cups.

Strange as it may seem, with all the pinks that have been introduced throughout the years Mrs. Backhouse still rates tops for garden, cut flowers and even naturalizing. Its color may vary from year to year, but opening slowly in cool weather it attains its true apricot-pink color.

AUTUMN FLOWERING BULBS

We ship these bulbs in mid-summer and they should be planted immediately. Planted late their chance of survival, especially in the North, is slim. Large planting are to be seen at Colonial Williamsburg.

These bulbs resent transplanting, if done at the wrong time, but will increase rapidly if left undisturbed. Care should be taken when digging not to break the thick fleshy roots. Plant so the bulbs are covered with 4 or 5 inches of soil; in the South, plant so the tips of the bulbs are barely covered. Before the foliage dies down mark the location so you won't dig them up.
